

OLIVETTI UNDERWOOD COPIA II

OLIVETTI UNDERWOOD COPIA II

OLIVETTI UNDERWOOD COPIA II

The **Copia II** is simple to operate. Merely select the number of copies and the size desired; press "PRINT" and dry copies are delivered face up, stacked, at desk top level.

The **Copia II** permits you to select the size of your copy from 8-1/2" x 6" to 8-1/2" x 14" (legal size). Waste is minimized because *you never copy more than you need or pay for more than you copy!*

The **Copia II** rolls on casters, operates on standard 115 volt power, and its size (40" high, 42" wide and 22" deep) affords maximum convenience.

The Copia II produces 1 to 25 consistently sharp, dry copies, 7 seconds apart, from single sheets, rigid materials, or bound books. The gentle slope of the front panel eliminates damage to book bindings.

The Copia II reproduces color, ball point ink, half tones, photos, even three dimensional objects. Originals are never fed *through* the Copia II, thus protecting important documents from damage.

The Copia II provides a work area to assure easy handling of items to be copied as well as space for finished copies.

The Copia II houses a roll of copy paper, 1/3 of a mile in length...sufficient to reproduce 2000 letter size, high resolution copies.

The Copia II stores and automatically feeds sufficient toner, from a sealed container, for 10,000 copies. An advanced electronic density reading device guarantees uniform print quality.

The Copia II is equipped with a signal light located on the control panel, which alerts the operator in advance when the copy paper or toner must be replaced.

The Copia II eliminates frequent toner handling, replacing of paper stacks, short paper rolls and small capacity toner containers.
